INTERESTING CASE

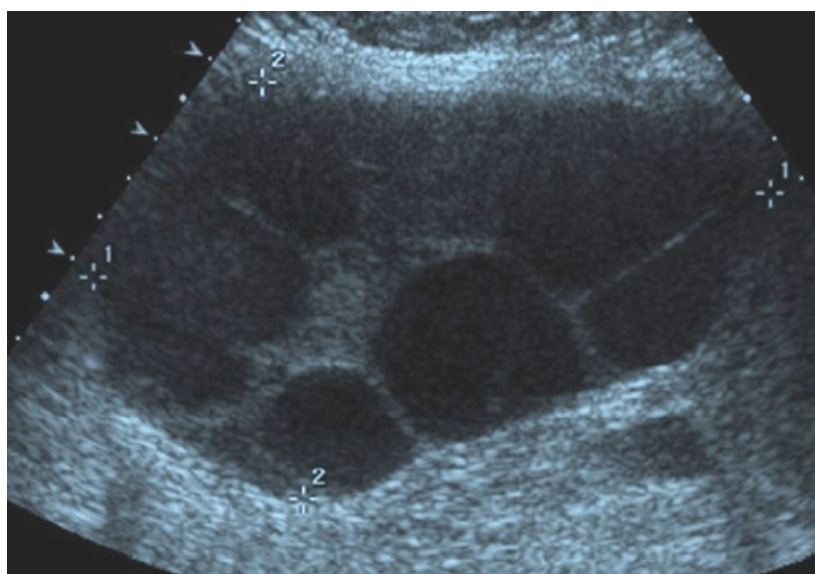

Clinical data:

11-year-old girl child with abdominal pain, diffuse abdominal swelling for two weeks. She had attained menarche at an early age (9 years of age). She had irregular periods. Her maternal aunt had a history of hypothyroidism.

General examination was unremarkable. There was no obvious palpable mass. Her initial laboratory investigations were within normal limits.

Imaging:

An ultrasound of the abdomen was performed as the first line of imaging. Figure 1: *Ultrasound imaging showed large, multiloculated cystic lesions in bilateral adnexa. Internal septa 3 mm. No solid components, or papillary excrescences.*

Dr. Kushal Babu Gehlot

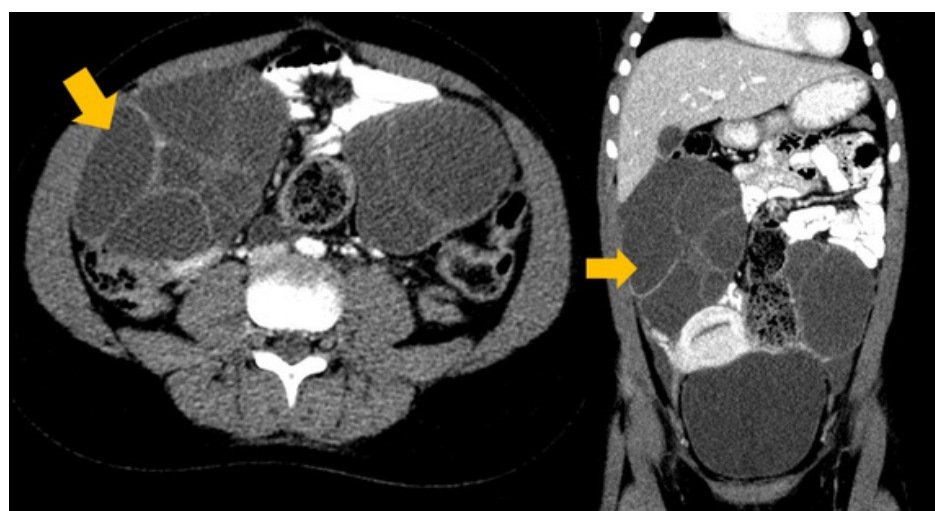

Dr. Mahaveer Goyal

Dr. K. Gopinathan

INTERESTING CASE

A contrast enhanced CT scan of the abdomen was performed for further evaluation.

Figure 2: CT imaging confirmed the presence of large, multiloculated, cystic lesions seen in bilateral adnexa as seen on the ultrasound, extending till the inferior surface of the liver on the right side.

+

Differential diagnosis	Points for	Points against
Borderline mucinous cystadenoma	Large, multilocular cystic lesions	Usually unilateral Young age of patient
Borderline serous cystadenoma	Bilateral lesions	Usually smaller, thin walled Young age of patient
Juvenile granulosa cell tumour	h/o early menarche, young age of presentation	Usually unilateral, with solid component, maybe associated with haemorrhage
Ovarian Hyperstimulation Syndrome (OHSS)	Patient is biochemically hypothyroid Bilateral, symmetrically enlarged ovaries containing variable sized cysts	Rare incidence

INTERESTING CASE

Further workup:

As the patient had early menarche and short stature, an Endocrinology consult was sought. She was found to have grossly elevated TSH (583 uIU/ml . 0.3-4.5 Normal limit) suggestive of long-standing hypothyroidism.

An ultrasound screening of the thyroid gland was performed, which showed features of diffuse thyroid disease.

Figure 3: *Ultrasound imaging of the thyroid gland showed a diffusely heterogeneous echotexture of thyroid gland, with no obvious focal lesions.*

Diagnosis: Van Wyk-Grumbach Syndrome –Spontaneous OHSS

Discussion:

Van Wyk-Grumbach syndrome is a very rare manifestation of spontaneous Ovarian hyperstimulation syndrome.(OHSS). It is associated with early pubertal developmental and primary hypothyroidism. The excessive production of TSH in turn leads to over-stimulation of the follicle stimulating hormone (FSH) receptors in the ovaries, which leads to increased production of estrogen. This results in precocious puberty and early development of secondary sexual characteristics.

Treatment involves thyroid replacement therapy.

Case contributed by Dr. Kurian C. Eapen, PG Registrar, Dept. of Radiology, Christian Medical College, Vellore.

ISPR EC meeting at IRIA Amritsar **4th February 2023**

The 75th Annual Conference of IRIA held at Amritsar, from 2nd to 5th February, saw the active participation by ISPR members both as faculty and as delegates.

The EC meeting of the ISPR was held at Guru Nanak University, Amritsar on 4 February 2023. The EC meeting was chaired by Dr. Kanimozhi C.V, Joint Secretary ISPR.

Dr. Ishan Kumar updated EC members about the preliminary preparations and planning of the Mid-Term CME scheduled to be conducted at Varanasi in April 2023.

An update on the preparations for the National Conference 2023 was given by Dr. Priscilla Joshi.

ISPR Mid-Term CME BHU, Varanasi

The National Mid-Term CME of ISPR, was held in Varanasi on 8th April, on the theme of 'Paediatric Onco-Imaging'. The CME was conducted at the Institute of Medical Sciences, Banaras Hindu University and was attended by 167 delegates from across the country.

The CME was divided into 3 sessions under the sub-themes of 'Neuro-Oncology', 'Thorax & Musculoskeletal Oncology' and 'Abdominal Oncology'.

Dr. Ashish Verma, Organising Chairman, and Dr. Ishan Kumar, Organising Secretary, along with their entire team, worked hard to ensure the success of the event.

ISPR EC Meeting - Varanasi, April 2023

The second Executive Committee meeting of ISPR was held on 7th April, 6.30 pm onwards at BHU, Varanasi. The EC meeting was chaired by Dr. Sridhar Gibikote, General Secretary ISPR.

Key points discussed:

Update on ISPR account details was provided by our Treasurer, Dr. Anmol Bhatia

It was agreed upon by EC members that a common email address may be created for the office bearers to aid easy administration and record keeping of all email correspondence.

Dr. Priscilla Joshi updated the EC on the preparations for the 21st Annual Conference scheduled to be held at Pune in September 2023.

Following discussion at the EC meeting, it was decided to institute awards for best paper and best poster presentations. This would be implemented at the Pune conference.

It was agreed that former Presidents of the ISPR would be requested to attend future EC meetings as a special invitee so as to benefit from their experience and wisdom.

QUIZ Answer

Findings : .Posterior pituitary bright spot is absent in the pituitary fossa. Instead the posterior pituitary bright spot is seen at the medial eminence (yellow arrows). Anterior pituitary is small in height. The infundibular stalk is not identified (s/o stalk interruption). Compare this with Figure 3 which shows a normal pituitary gland in another 12 yr old child.

Diagnosis: **Ectopic pituitary with stalk interruption syndrome.**

Case contributed by Dr. Nikshita Jain,
Assistant Professor, Dept. of Radiology,
Christian Medical College, Vellore.

**We encourage members to contribute
interesting cases for this section.**
